Fume Filtration System:

Stainless steel pre-filter module

HEPA filter

Electrostatic particulate filtration module

UV odor eliminator

Columnar activated carbon filter module

油烟吸入前端不锈钢高效过滤模块连高效HEPA过滤器、10微米以上的油烟颗粒去除率高达95%以上。细微的油烟及烟尘再经由高压静电处理器与UV紫外线光解氧化将被完全去除。油烟中的气味将由柱状活性炭过滤器过滤，最终净化为无异味空气排放出去。

Purification Process:

Cooking fumes first pass through the stainless steel pre-filter and HEPA filter, removing over 95% of particles larger than 10 um. Fine particles are then eliminated via high-voltage electrostatic treatment and UV photolysis oxidation. Odors are adsorbed by the columnar activated carbon filter, releasing purified, odorless air.
